◆ Bloomfield Hills, Michigan

Every breath

Active trials 0 · Volunteers partnered 0 · Publications 0 · Years of service 7

COPD · *AURORA-1 enrolling* ◆ IPF · *HELIX-3 Phase 2* ◆ Asthma · *MERIDIAN-2 biologic response* ◆ Severe asthma · *Open label ext*

Seven years, *measured* in breaths and published evidence.

◆ Last updated · LIVE Figures are pulled from APRIM's operations ledger and CITI-audited trial roster.

0 — Volunteers partnered with. Across asthma, COPD, IPF, post-viral cohorts.

0+ — Phase II–IV studies. Sponsored by 14 multinational partners.

0 — Peer-reviewed papers. AJRCCM · ERJ · Chest · Thorax.

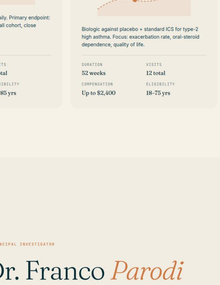

0% — Volunteer retention. Protocol completion, 2019–2024.

◆ Our method

A rhythm of *rigor* — measured across five years of follow-up.

Every protocol we run anchors on the same three disciplines: deep phenotyping at baseline, standardized spirometry on every visit, and longitudinal follow-up that lasts years after the last dose. The chart shows mean FEV₁ across an APRIM cohort vs. standard-of-care comparators.

See our published methodology →

N · 412 volunteers · Mean Δ FEV₁ · +0.14 L · Exacerbations · −42% · Published · AJRCCM · 2024 · p-value · < 0.001

Three studies are *enrolling now*.

Every study below accepts direct volunteer referrals. Screening is free; travel is reimbursed; your own pulmonologist stays in the loop.

◆ Phase 2 · Enrolling

AURORA-1 — *moderate-to-severe COPD*

Once-daily inhaled therapy testing whether a titrated dose slows FEV₁ decline in adults over 24 weeks.

Duration · 24 weeks · Visits · 7 total · Compensation · Up to $1,200 · Eligibility · 40–80 yrs

◆ Phase 2 · Enrolling

HELIX-3 — *IPF*

Novel anti-fibrotic, oral, once-daily. Primary endpoint: change in FVC at 26 weeks. Small cohort, close follow-up.

Duration · 26 weeks · Visits · 9 total · Compensation · Up to $1,800 · Eligibility · 50–85 yrs

◆ Phase 3 · Enrolling

MERIDIAN-2 — *severe asthma*

Biologic against placebo + standard ICS for type-2 high asthma. Focus: exacerbation rate, oral-steroid dependence, quality of life.

Duration · 52 weeks · Visits · 12 total · Compensation · Up to $2,400 · Eligibility · 18–75 yrs

◆ Principal Investigator

Dr. Franco *Parodi*

Education · Wayne State School of Medicine · Henry Ford pulmonology fellowship

Memberships · American Thoracic Society · CHEST · ACCP

Since · APRIM clinical research · FMA pulmonary partner

A clinical trial isn't a questionnaire — it's a five-year conversation with someone who trusts us with their lungs. We never forget the weight of that.

Franco Parodi
Founder & PI · APRIM

◆ What being a volunteer feels like

Four careful *steps*.

We don't believe in mystery. Here is exactly what happens from the first phone call to the last follow-up visit — with the option to stop at any step, no questions asked.

i — **Conversation, not commitment**
A 20-minute call with an APRIM coordinator. We describe the trial, you describe your story, and we check whether there's a mutual fit.
Day 01

ii — **Screening visit**
Spirometry, bloodwork, medication review. You leave with a full copy of your pulmonary workup — whether you enroll or not.
Week 01

iii — **Treatment phase**
Regular visits on a predictable cadence. Our coordinator is one text away, every weekday.
Weeks 02–48

iv — **Long-term follow-up**
Optional annual visits up to five years, so the science — and your health — keeps moving forward together.
Years 1–5

I came in thinking I was donating my lungs to science. I left with a team who called me on Christmas Eve to check how I was breathing.

Marta R., 68
Volunteer · IPF cohort, 2022–2024

◆ Start here

Let's *breathe* forward.

Whether you're a pulmonologist with a patient to refer, a sponsor evaluating sites, or a volunteer considering a trial — a single conversation starts the whole thing.
